April 19, 2016

On behalf of the California Emergency Medical Services Authority (EMSA), I welcome you to the 3rd EMS Health Information Exchange (HIE) Summit that will provide information and stimulate dialogue on innovations in health information exchange. This year's Summit is an opportunity to connect our Federal partners, local EMS agency representatives, EMS providers, hospital administrators, and health information organizations who are actively working to establish health information exchange and explore the benefit of integrating emergency medical services.

Our speakers include Dr. Thomas A. Mason, Chief Medical Officer for the Office of the National Coordinator for Health Information Technology (ONC). In the keynote presentation, he will share his vision for National Interoperability for Health Information Technology. You will also have the opportunity to hear presentations on:

- Sustainability of health information exchange infrastructure
- Health information exchange progress and policy direction nationwide
- Electronic Patient Care Record innovation to facilitate HIE in EMS
- National EMS Information System evolution and integration with HIE efforts
- Consumable Data and Data Governance standards development
- Physicians Order for Life Sustaining Treatment (POLST) eRegistry development

I thank each of you for attending and adding your expertise to this meeting. As organization leaders, it is your knowledge, experience, and initiative that will advance EMS. We hope that these discussions will lead to a common vision and goals that can leverage your support and leadership to improve Emergency Medical Services. Health Information Exchange is one of the tools that will enhance the quality and safety of the health services provided by EMS.

We are grateful for the support of our sponsors and vendors that made this conference possible. Their participation is key, not only for supporting this Summit, but to the eventual success of our project, because they must support the technology and the application of information to EMS practice. I encourage you to spend time meeting and visiting with each vendor during the meeting.

I hope your time here is enjoyable, informative, and rewarding.

A handwritten signature in blue ink that reads "Howard Backer".

Howard Backer, MD, MPH, FACEP
Director
California Emergency Medical Services Authority

AGENDA: Summit Day 1

Tuesday, April 19, 2016 — 9:00 am–5:00 pm
Banquet Room

- | | |

Healthcare Connected

Status

Quickly check diversion status for hospitals in your county and out-of-network.

Transport Status

View the availability of ambulances and airships.

MCI

Obtain real-time information for ED capacity and patient tracking.

Messages

Stay connected with in-network and out-of-network facilities.

Assessment

Easily make a request for resources or report your facility's resource status.

Bed Capacity

Report your current and expected bed capacity by bed type.

Data Exchange

Access or interface with third party systems.

Reports

Effortlessly produce historical reports of data captured in ReddiNet.

Family Reunification Center

FRC assists in reuniting victims, the missing and unaccompanied minors with family following a mass casualty incident (MCI). FRC enables hospitals and emergency support teams to collect and access critical data in order to facilitate victim identification and family reunification
